

#### Description

Eurocopter is the world's leader in the Business Aviation and Private segment. The growing affluence and the modern-day race against time have rendered corporate executives all over the world to turn to the helicopter as a vital complement to business jets. The customer base in this sector is multi-faceted – ranging from private VIP customers, Small and Medium Enterprises to Multi-National Corporations.

The customers are also highly demanding. High cruise speed, comfort, low noise signature, executive appearance and last but not least flight safety – these are all decisive purchase elements.

In addition, for these corporate executives, it is the duty of the helicopter manufacturers to keep up to the times and to equip the aircraft with the latest business and communication tools in order to optimize every single minute of their travelling time.

Eurocopter has successfully integrated the above elements into each one of its extensive range of helicopters, all equipped with the state-of-the-art technology. Eurocopter is hence well-placed in this vibrant market segment with the world's most comprehensive range of products.

This includes the single-engine EC120, EC130 and AS350 Ecureuil/AStar family, the light twin-engine AS355NP, EC135 and EC145, up to the top-of-the-range medium twins, the Dauphin AS365 N3 and the EC155 B1 and last but not least, the heavy twin-engine AS332 and EC225 Super Puma helicopters.

The EC135 "l'Hélicoptère par Hermès" perfectly illustrates Eurocopter's will to fuse technology and design as well as to bring corporate travel to greater heights. Hermès has now given the EC135 a stylish profile and a highly functional interior that has been carefully worked using all the techniques, materials and impeccable standards of its leather craftsmen.
